Sale Managed By: WagyuSale.com

For the breeders, of the breeders, by the breeders!

WagyuSale.com, LLC would like to *thank* everyone involved with the 2017 Breeder's Kansas City Wagyu Sale! Featuring many world class consignments from the breed's finest programs, this sale is a tremendous opportunity for wagyu breeders around the world to add top shelf genetics to their herds!

Yours for better Wagyu,
Grant Whitmer & Cole Morace

- SALE ORDER -

Bulls - Females - Embryos - Semen

General Information:

• NO LIVE CATTLE AT AUCTION SITE.

- All buyers expected to acquire and negotiate transport of live animals and frozen genetics from the consignors' various ranches or place of storage at their own expense.
- Featuring lots of frozen embryos & semen as well as live lots of heifers, cows and bulls of all ages red wagyu, black wagyu, composite and purebred.
- 7% Total Consignment Fee Charged with 2% of that being donated to American Wagyu Association.
- The 2017 Breeder's Kansas City Wagyu Sale is a select sale and not all submitted lots are admitted into the sale. Final lot decisions are made by a panel of experienced breeders from the AWA membership. Panelists have no personal consignments in sale for breed they are paneling for. Panelists are follows:

Black Wagyu

Josh Yarborough
Ken Tew
Shane Lindsay

Red Wagyu

Dr Aaron Cooper
Ken Tew
Josh Yarborough

Herd & Animal Health

All live animals and frozen lots are boarded/stored by seller's.

Overall satisfaction of health/viability status of live and frozen lots is a matter between buyer and seller.

Terms & Conditions:

Sales are final and must be paid before seller will release animal or frozen lot purchased. Buyer assumes all risk once lot is purchased and all costs from then on are buyer's responsibility. Any export or transportation costs are buyer's responsibility.

Shipment of Purchases:

All shipping and incidental transportation costs from seller's location are buyer's responsibility.

Liability:

Sale attendees and patrons attend sale at their own risk. WagyuRanch.com, LLC., its employees & representatives assume no liability, legal or otherwise, for any accidents, damages, or injuries that may occur.

Sale Selection & Order:

Sale selection and order was determined by tallying individually reported scores from panel of experienced breeders. Many thanks to the following breeders who were willing to step up and take the time to make all the tough decisions!

Black Wagyu: Shane Lindsay, Josh Yarborough, Ken Tew

Red Wagyu: Dr Aaron Cooper, Josh Yarborough, Ken Tew

Sale Bonuses!

Hawkeye Breeders Services is donating an all expenses conventional semen collection for the top two selling bulls of the 2017 Breeder's Kansas City Wagyu Sale! Includes all collection and freezing costs. Does not include transportation costs to and from Hawkeye facility.

Additional Note: All lots are sold as is and it is the buyer's responsibility to insure animals are accurately represented before bidding. WagyuSale.com is not responsible for any accidental or intentional misrepresentation of any seller's consignment. BUYER BEWARE.

The Excitement is building for a sale you don't want to miss.

UKB MR ITOKITASURU is the ONLY LIVING WESTHOLME 007 LINE BULL

CURRENTLY REGISTERED IN THE AWA!

“Gus” as he is known locally in central Texas has a local following of devoted F1 buyers because his F1’s just “Taste different.” The previous owners said that the big commercial F1 buyers like his calves so much that they used him to cover twice as many cows as their other bulls. If he were not an F11 carrier he would never be for sale! Rare chance for an elite program to be the only breeders in the breed injecting a whole new line of high Tajima Westholme 007 blood into their herd! Bull is currently on cows in central Texas.

This impressive Shigefuku x Sanshiga son was the highest growth, outlier calf out of 4 embryo flushmate bull calves and is a maternal brother to Tajimax! Shigefuku is a half brother to Hirashigekatsu, the bull that single handedly changed the wagyu industry in Japan. Sanshiga is one of the great high tajima cows of the breed, a 1500 lb broody prototype mama cow who is changing the breed one flush at a time. Here is a chance to inject the powerful combo of the only 100% pure Kedaka sire out of Japan along with one of the highest powered high tajima cows of the breed in every calf!

CLV Kyodai FB24522 is a 100% black genetics bull with Itomoritaka as his paternal grandsire and Itoshigefuji TF147 as his maternal grandsire. So the top milk EBV bull and the largest foundation bull at 2640lbs are in his genetics. His dam, Itomichitayasu was an emergency slaughter without being finished on grain and the steak pictured is of this grassfed cow. Note the thin exterior fat and the fine marbling. She was about 1400 lbs and Kyodai should throw some fine calves. Kyodai is free of known recessives and AA on SCD by parentage. He is also tested free of Johnes.

LOT 05 CLV KYODAI

ESF BAR R SANJIROU 4P 042-147 has been the mainstay herd bull at WagyuRanch.com for many years for several reasons, the least of which is: 1850 lb 70% Tajimas don't grow on trees! His calves are thicker and heavier boned than average and mature into gorgeous well above average animals. His thick, heavy boned F1's marble up above prime even on grass alone. We have retained dozens of his daughters that were just too fancy to let go. Sired by the great 4P out of a Takazakara x Yuriko line cow, this bull has that rare combo of growth and high Tajima marbling all wrapped up into one that breeders and buyers love! He is currently on cows in upstate NY ready to go to work improving his next herd.

RARE OPPORTUNITY here to purchase full possession and 70% semen interest in the HIGH SELLING BULL OF THE 2017 TEXAS WAGYU ASSOCIATION SALE that is now CSS QUALIFIED! Will pay for himself over and over again with international semen sales! We sent him straight to Sexing Technologies in Navasota, TX and paid for him to get all the way through stringent required tests and quarantine to make the CSS barn there where he resides now. In order to sell semen or embryos most countries overseas require CSS semen and this bull made it all the way through! His semen quality is so high that it qualifies for sorted sexed semen with ease. Make your own export eligible heifer sexed red embryos without paying \$250 per straw! SOR Big Al hails from the fabled Saranac Oaks program and is the spitting image of his great sire HB Big Al. His maternal grand dam is the great MS Homare J 30E cow that grossed over \$500,000 during her career at UKB. She is a rare JVP Homare daughter which is an outcross cow family to majority of red wagyu herds around the world. Dr Aaron Cooper said about this bull "SOR Big Al's structural design, overall balance and disposition are impressive. He has a rare combination of smoothness and yet power at the same time. His daughters will pay huge dividends for many years to come because of his maternal value." Here is your chance to get in the international semen and embryo game and eventually see him out on your pasture covering your cows!

Notes

724C is a once in a lifetime opportunity for the lucky winning bidder to bring home a direct daughter of a World K cow! Mitochondrial DNA is only passed by the mother to her offspring. Bulls cannot pass it to their offspring, and that is one of many reasons why these maternal line World K genetics cows are so highly prized. Sired by the great CHR herd bull 602A, this beautiful heifer will be a prized gem in any herd in the world that will pay for herself over and over again with every flush.

Now here is a rare opportunity to acquire rare mishima genetics ready to breed or flush! Mishima are the least diluted of all Japanese native cattle also referred to as "wagyu." They never had any continental blood mixed liked all other wagyu did... Isolated on a small island, they are highly protected as a national treasure and only 1 bull has ever been exported: TF152 Kamui. 718C is a beautiful, two year old, never been bred or flushed, super calm 25% mishima, 75% black wagyu heifer with many of the great wagyu sires' blood also coursing through her veins. Breed her back to TF152 Kamui and get 62.5% Mishimas in your backyard! For the most discerning Japanese cattle enthusiast.

PV03A is a young cow bred by Crescent Harbor Ranch. Being a very fertile cow she has bred via AI on the first attempt every year. The confirmed heifer pregnancy she is now carrying is sired by the unsurpassed World K's Sanjirou (FB2501) and due April 1, 2018, IBC = 3%. This resulting calf should exhibit amazing ribeye size, muscle definition and marbling heritability. PV03A exhibits the largest udder and is the best milking of the several full-siblings we have raised. Milk, size and phenotype from a high percentage Tajima is surely rare. She has had no trouble maintaining excellent condition while raising her calves. PV03A is still gaining weight on a trek to her future mature weight! As part of our biennial whole-herd testing, PV03A was verified on 8/15/17 to be negative for Johnes, BVD PI, and Neospora.

The sire of PV03A, Kikuyasu 400, was selected as one of the bulls to import from Japan because his sire's record. Kikuyasudo's progeny have a reputation for excellent carcass quality. Kikuyasu is by far the largest 100% Tajima sire ever exported from Japan weighing 1980lbs; he passes on to his offspring top-of-the-breed ribeye size along with size, structure and phenotype better than any other Tajima sire. Kikuyasu 400 sired Kinu T077, a cow which to date has produced progeny which have all graded AUS BMS 9+ (Prime or Prime +). Kikuyasu 400 semen is highly valued; at recent public auctions over the past 2 years, his semen has sold for \$450 to \$700 per straw. On Lot 6's bottom side, CHR Ms Kitaguni 339's grandsire is World K's Kitaguni Jr. who reputedly passes on milk and growth. However, numerous carcass results have shown that Kitaguni Jr. also passes on extreme marbling and marbling fineness equal to Yasufuku Jr. and TF148. Within Australia's progeny testing, 65% of his F1 carcasses graded 9+ on the Australian scale. Also found in Lot 6's pedigree is Hirashigetayasu J2351, who has had 80% of the steers he has sired grade A5 in Japan. The pedigree of PV03A is packed with amazing genetics!

These embryos were produced 10 years ago by the great Wagyu master breeder and Wagyu importer Shogo Takada at Trans Ova Iowa, and the 5 embryos remain at Trans Ova Iowa.

The sire of the embryos is Itozuru Doi 151, FB 3685 utilizing the original 151 semen arguably one of the best sires in the wagyu breed when you consider Frame Score, Phenotype Carcass Quality, and especially the fine Marbling we all seek. Original Itozuru Doi semen availability is quite low now.

The Dam of the embryos is TF 703 FB 7572... A daughter of Mr. Takada's Kimifuku 3 FB 4568 who is a son of the Great Japanese sire Tanifuku Doi.

Kimifuku 3 himself was not exported from Japan, only a very small amount of his semen was imported into the US. Sire is an F11 carrier, dam is a CL16 carrier.

LOT 14 5 CONVENTIONAL GRADE 1 EMBROYOS

CHR Hirashige Tyasu is a product of Hirashigetayasu, Takazakura and Suzatan. This combination has great potential for good growth, larger than usual frames and fantastic carcasses. A progeny test given in Japan showed that 80% of Hirashigetayasu's steers would be graded at A5, the highest grade possible of the Japan scale.

Rowe Ms Haruki's pedigree list some of the greats of the wagyu world; Michifuku, Suztani, Kitaguni and 068. She should produce some of the highest possible carcass grades with this combination of genetics.

• *Paradocs Embryo Transfer, Green Bay, Wisconsin*

This rare pairing is guaranteed to have the desirable BB BC or CC Exon 5 gene for marbling and growth. Michiyoshi FB9420 is the Number 5 marbling bull and his ribeye EPD is +.58. Semen of him is not available anymore. The dam's side of the pedigree has Jiro 22T, Itozuru Doi, Kimifuku 3 and Itomichi, all in direct line. A great opportunity with the rare Michiyoshi combined with Jiro and the other great bulls on the maternal side. Dam of embryos is AA-7 SCD/Tenderness.

Sire is known for size and growth on both sides of the pedigree. The dam's sire is Itoshigenami TF148, he is considered to be one of the best Wagyu bulls for carcass traits. Dam's maternal grandsire is a very well balanced bull known for passing on great length of body and added muscle shape. This crossing gives a low 2% inbreeding coefficient. Maternal family goes back to the great Okutani cow, imported from Japan in 1993.

Sire and dam both free of all known recessives.

This mating has fantastic genetics from some of the great original imported Wagyu cattle from Japan: World K's Haruki 2, World K's Suzutani, World K's Michifuku, Itoshigenami, JVP Chiyofuku, JVP Kikutasu-400 and JVP Shigehime 208. The balanced-carcass sire, Bar R Shigeshigetani 30T ranked #1 for rib eye area, #1 for carcass weight, #2 for back fat, and #8 for marbling in the 2014 National Wagyu Sire Summary with 26 progeny. He is a large-framed Tajima bull and his progeny show excellent carcass traits plus growth performance. The dam, LMR Ms Itoshigenami, has excellent marbling and fullblood terminal index EBV values that showcase her great-marbling Tajima ancestors' genetics.

This donor is too good to be true. Most breeders say she is the deepest chested, thickest, longest Wagyu cow they have ever seen when they see her. They kept getting so many repeat requests at TransOva to see her, that they put her in her own pasture paddock close to the office to save time showing her. An IVF vet at TransOva said that Nanashi is the "biggest, thickest, nicest looking wagyu cow they have ever seen there," and they "didn't know wagyu cows could look like that." What is even more jaw dropping than her phenotype is the fact she is sired by arguably the greatest composite bull of all time, with Sanjirou and Kitaguni Jr as 2nd and 3rd sires. 60%+ Tajima cows just are not supposed to look anything like this! She is a definite breed-changing superfreak. Combining Nanashi with the highest selling wagyu bull of all time "Kenhanafuji," arguably the greatest bull to ever leave Japan, as evidenced by the Japanese paying \$150,000 for him AFTER he arrived in America, will produce breed changing sires and donors.

This donor is sired by the immortal Itozuru Doi 151 (Considered by many the greatest composite growth x marbling bull, and only bull Takeda ever had cloned!), Takazakara (The ultimate trait magnifier) and Suzutani (undisputed "Queen of the Breed) all in the same pedigree! Of all the bulls Takeda brought in, only 1 was ever cloned, and he was cloned TWICE: Itozuru Doi 151. Itozuru Doi 151 is widely considered the greatest all around composite bull of the breed and his original straws have sold for over \$15,000 each. Suzutani is hands down considered the greatest wagyu cow to ever leave Japan as Sanjirou and Shigeshigetani's dam. Takazakara is considered perhaps the best maternal sire by many top breeders because of his marbling, growth and milk. Crossing 325 with "400" the largest 100% Tajima ever imported from Japan weighing nearly 2000 lbs, magnifies the growth and marbling magnificently expressed phenotypically in 325. This cross gives you a pure Doi blood sire (Doi blood is what made kobe beef in Hyogo, Japan famous) with a composite dam sired by the greatest composite sire, and out of Suzutaka 2, the daughter of the greatest cow in the breed period, Suzutani.

Tajimax is the biggest fullblood black wagyu bull I have ever seen and hit the scales at 2000 lbs. before his 3rd birthday says the owner Grant Whitmer. Get him to send you a video clip of Tajimax breeding cows that appear half his size! He is an AA6 bull with the highest weight gains I have ever heard of and the owner also claims there has never been difficulty calving even among heif-ers. Having said all this he is a Tajima so great marbling as well! Some of his ancestors you may recognize are Hirashigetayasu, Kitateruyasudo, Shigesigetani, Haruki and Sanjiro.

Stonyrun ID 151 Ichiro (FB11842), Ichiro was bred for producer profit by combining the performance of the international breed leading sire, Itozurudoi TF 151 with the proven performance of the maternal genetic powerhouse Suzutani. Suzutani has displayed her genetic merit by being the dam of Wagyu breed leaders Sanjirou and Shigeshigetani. Ichiro's dam is a maternal sister to Sanjirou and Shigeshigetani. Ichiro's progeny have shown outstanding carcasses and growth.

MAR Kitagonia 744 (PB21025), is one of our stand out donors. She has tremendous depth of rib, and is as correct as they come. This female is gentle and has been a great mother with ample milk. She has averaged 22 embryos per flush and we expect that fertility and mothering ability to carry down to her offspring.

This mating has fantastic genetics from some of the great original imported Wagyu cattle from Japan: TF Itomichi 1/2, World K's Michifuku, JVP Fukutsuru-068, World K's Takazakura and World K's Suzutani. Fujiyoshi sire, TF Itomichi 1/2, is known for adding growth, milking ability and increased carcass size to his progeny while maintaining good marbling. The dam is a cross of some of the top-marbling Tajima Wagyu. World K's Michifuku genetics are proven by consistent high EBV values for marbling, fineness of marbling and fullblood terminal index. Although smaller in frame size, JVP Fukutsuru 068 and World K's Takazakura, are known for passing on the abundant and fineness of marbling traits to their progeny. Finally, World K's Suzutani has proven that she can pass along desirable traits, which include excellent marbling and large carcass size, through her world-renowned offspring World K's Sanjirou and Shigeshigetani.

DONOR

LMR Toshiro 1-3 723T (FB7475), is a Trait Leader among all Wagyu Sires outside of Japan. With accuracy figures of 80%, 723T's 200-day Weight EBV (+15) and 400-day Weight EBV (+32) are in the top 10% and top 5% of the breed, respectively, according to BREEDPLAN. 723T's Fullblood Terminal Index of +\$223 ranks him in the top 7%. An excellent Milking EBV (+8), ranking him in the top 3%, can be expected to be passed on to progeny from this combination of genetics. In addition, 723T's Carcass Weight EBV (+37) ranks him in the top 1%. 723T's dam, WKS Reiko, was among the first foundation animals brought into the US (in 1994) and was sired by Kitaguni 78 – who was listed as the #3 Sire by Kenichi Ono in Elite Wagyu in Japan. Kitaguni 78 was the winner of the 2002 All-Japan Carcass Contest and is the sire of Kitaguni Jr. Certainly Kitaguni 78's presence on the maternal side of Toshiro's pedigree accounts for much of his astounding marbling ability. MAR Kitagonia 744 (PB21025), is one of our stand out donors. She has tremendous depth of rib, and is as correct as they come. This female is gentle and has been a great mother with ample milk. The sire, TF Yasutani 1012 has excellent EBVs for marbling; carcass weight and Fullblood Terminal Index. He carries the preferred type AA SCD gene, which indicates that he has superior fat composition with a lower melting point. The dam, Mrs Kitaguni's Kenko, has shown tremendous growth and as an open two-year-old weighed 1,200#. Her pedigree is filled with well-known, proven genetics that offer her great traits for marbling, growth, carcass size and large rib eye. She had her first calf by TF Yasutani 1012 in 2017. This mating produced an 87# spectacular looking bull calf.

Sire: Ranking #19 in the 2016 Sire Report, this bull is a total outcross to the Wagyu genetics. His sire is the highest content Kedata bull outside of Japan, 005 Shigefuku J1822. This is a well-balanced, long, good spring of rib, very easy keeping kind of bull with thick loin, great feet and legs. He brings lots of milk to his daughters.

Donor Dam: Tenderness score of 5 AA SCD fat and EXON BC carrier (a rare gene for excellent marbling and growth). Comes from a powerful pairing of BMR 777 and BAR R Nakigishiro 56T. BMR embryos recently sold for \$1000s each.

LOT 38 EXCEPTIONAL QUALITY CALF DUE MARCH 6, 2018 WITH QUALITY RECIP COW

• Comes with recip F1 Cow (50/50 Wagyu Commercial Bull with score of 10 AA SCD fat x Registered Angus cow with high milk output). These is one of our own heifers that we breed for replacements for our registered Angus cows.

They are outstanding cows that calve with ease and produce milk well.

LOT 39 EXCEPTIONAL QUALITY CALF DUE MARCH 6, 2018 WITH QUALITY RECIP COW

• Comes with recip F1 Cow (50/50 Wagyu Commercial Bull with score of 10 AA SCD fat x Registered Angus cow with high milk output). These is one of our own heifers that we breed for replacements for our registered Angus cows.

They are outstanding cows that calve with ease and produce milk well.

Stonyrun ID 151 Ichiro (FB11842), Ichiro was bred for producer profit by combining the performance of the international breed leading sire, Itozurudo TF 151 with the proven performance of the maternal genetic powerhouse Suzutani. Suzutani has displayed her genetic merit by being the dam of Wagyu breed leaders Sanjiro and Shigeshigetani. Ichiro's dam is a maternal sister to Sanjiro and Shigeshigetani. Ichiro's progeny have shown outstanding carcasses and growth.

Mar Hanshoku 514 (PB21598), is a feminine, bold sprung and deep middled female that we have had great success with as a donor. To date her offspring have proven themselves with growth, weight of gain and disposition. We are very pleased with this females ability to create offspring that carry all of her great genetic traits.

They are purebred polled embryos, I used Bar R's sire Arimura 30B who is homozygous polled so all resulting cattle will be polled and my dam is MFC Itomoritaka 540C who I bought from Muddy Flats cattle. She is a full blood and an AA7 and has been a great cow. I feel like this makes a great combination to produce some really good polled cows to build a herd with. Sired by Bar R Arimura 30B, the first homozygous polled purebred Wagyu bull registered by Bar R Cattle Co. Bar R Arimura is grandsired by Shigeshigetani 30T who ranks #1 for ribeye, #1 for carcass weight and #8 for marbling. Bar R Arimura's dam, Bar R 5U, also has a great pedigree including Takazakura, Michifuku and JVP Fukutsuru 068; she sold at an auction last year for \$34,000! The dam of the embryos is a fullblood daughter of MFC Itomoritaka 0-41 who has sired class winners at the National Western Stock Show in Denver. She is a great combination of Itomoritaka, Michifuku, JVP Kikuyasu 400 and Sanjirou! The offspring from these embryos will be polled and will have over 99.2% wagyu blood. Don't miss out on this opportunity to bring some of the next great polled wagyu genetics to your ranch!

LOT 41 5 CONVENTIONAL GRADE 1 100% POLLED EMBRYOS

702 I Umehomare (FB 11275) is sired by Umemaru, probably the best bull ever sired by the original bull Hikari. Her dam is a Judo cow, whose dam was sired by the Namimaru bull, making her a paternal sister to the famous Akiko cow. This a chance to attain some special Red Wagyu genetics. 702 I Umehomare has powerful genetics from both sides of here pedigree and is F11 free.

Not only is 702 I Umehomare a genetic powerhouse cow, she is the definition of a "front pasture cow" as well. With the mating choices available, you're assured of adding much value to the genetics in your herd.

LOT 45 BUYERS CHOICE - SEE BELOW

• Selling buyer's choice of a set of 3 embryos from any of the below matings:

- Big Al x 702 I Umehomare
- Tamamaru x 702 I Umehomare (Exportable)
- Shigemaru x 702 I Umehomare (Exportable)
- Red Emperor x 702 I Umehomare

Shigefuku is the only 100% Kedaka bull to ever be exported. The bull was never actually exported, just a tank of his semen that was collected in Japan. He is sired by the great Dai 20 Hirashige who was the sire of the bull many consider to be the greatest modern wagyu bull Hirashigekatsu. This makes Shigefuku a half brother to the Japanese GOAT Hirashigekatsu, who literally changed the wagyu industry in Japan with his powerful growth and marbling combo that spiked profitability through the roof. Here is your chance to buy very rare semen that was collected in Japan, from the only 100% Kedaka bull we have! It even has Japanese writing on the straws!

624A is one of the only carrier free TF 146 sons in the world! TF 146 has semen that has significant fertilization problems to the point where getting calves out of him with AI or ET rarely if ever worked. That is why to this day there are only 11 fullblood animals in the herdbook sired by him. Like the vast majority of those 11 offspring, 624A was made using IVF technology. Since TF 146 was a carrier, having his elite genetics in a carrier free package make 624A even more special! TF 146 was the only linebred Yasutani Doi bull we have. Yasutani Doi was the sire of the most influential Tajima sire of all time: Yasufuku J930. Here is your chance to add linbred Yasutani Doi genetics to your herd in a carrier free package!

In the words of Mr Shogo Takeda himself "TF 149 Mitsuhiokura is a special gem." This bull is a strong outcross to many herds and is considered by many breeders who have seen his offspring to be the best sire of thickness in the breed.

Michifuku is thought to be the best carcass bull ever to leave Japan. Even with smaller framed offspring, his progeny's carcass characteristics are superb. Michifuku was formerly the number one marbling bull in the U.S. Wagyu Sire Summary, and consistently ranks second in ribeye area (REA) and fourth in backfat thickness (EPD). Michifuku's sire, Monjiro 11550, is linebred to Tajima J105, great-grandsire of Yasumi Doi J10328. Michifuku's dam, Michiko J655635, was sired by Tanishige 1526 and grandsired by Yasutanidoi J472. Yasumi Doi J10328 and Yasutanidoi J472 are considered to be two of the most famous of the Tajima/ Tajiri line.

Yasumi Doi J10328 sired Yasutanidoi J472, as well as Dai 2 Yasutsuru 774, sire of Fukutsuru 068. Yasumi Doi J10328 also grandsired Yasufuku 930, sire of Yasufuku Jr. and grandsire of Takazakura. Yasumi Doi J10328 appears twice in Michifuku's pedigree. This lineage supports Michifuku's high standing.

*According to World K's Group data on Michifuku's progeny in Australia:
12,000 F1 calves were fed 540 days [ADG = 2.31 lbs].*

85 percent graded 9+ on the Australian scale [grading above 12.9 on a numerical scale, which is three full grades above the highest USDA grade of Prime].

15 percent graded 7-9, on a numerical marbling scale 10-12.9. [On the USDA scale, numbers 7-9 would be considered Prime+ and Prime++.]

Descendants of Monjiro 11550 produced carcasses that sold at auction for \$16,000, \$18,000 and \$21,000 at the 2007 All-Japan Wagyu Competition.

Tajimax is the largest full blood wagyu we have seen anywhere period, and may be the largest framed high Tajima (63%) bull in the world outside Japan! If anyone out there has a higher growth performing 63% Tajima, please send us semen ordering info! Every wagyu breeder who has seen him in person to date says he is BY FAR the largest full blood wagyu they have ever seen. It is by sheer luck and coincidence that he happens to be high Tajima as well... A true freak of nature weighing 2000+ lbs at two and a half years old, this bull is the final answer to the ancient wagyu breeder's quest to somehow find a way to increase frame and growth without losing Tajima percentage. Use Tajimax to revolutionize the frame & growth curve trajectory of your herd WITHOUT SACRIFICING TAJIMA PERCENTAGE! Now we have a way to straighten out all those shorter, smaller framed, 800 to 1100 lb high Tajima cows in our herds to get those super fancy, thick boned heifer calves that grow up into 1400+lb fullblood mama cows. Tajimax calves average 70+ lbs and are significantly larger than any other bull we have ever used. The increased calf size notwithstanding, even a 900 lb fullblood wagyu cow owned by ReserveCattleCompany.com calved out one of his long legged, long spined, 80 lb calves without any problems. Gettin' tired of the fugly black jersey look in your fullblood herd? Tajimax is the antidote!

Sanjirou has the potential to become one of the most influential sires of the Tajima line, having great meat quality, large rib-eye area, thick rib and high yields. In the 2006 U.S. Wagyu Sire Summary, Sanjirou ranks third highest in marbling, behind Fukutsuru 068, but ahead of his sire, Michifuku.

Sanjirou is a linebred Yasumi Doi J10328 bull. Yasumi Doi J10328 sired Yasutanidoi J472 and grandsired both Fukutsuru 068 and Yasufuku 930. Sanjirou is out of the greatest cow to leave Japan, Suzutani, who represents one of the most potent bloodlines in Japan. Her great-grandsire, Yasumi Doi J10328, is widely known for his ability to produce excellent meat quality and size. Suzutani's sire was Tanishige 1526, whose progeny test results demonstrate that he has heritable traits with a BMS score +3.1 (above the national average of +2.1) and a yield grade of 72.7 percent.

Suzutani's mother was Suzunami and her grandsire was Shigeshigenami J10632, who has a reputation for producing the best genetics in Japan. Sanjirou's genetic background suggests that he will have ideal meat production efficiency, with great meat quality, large REA, thick rib and high yield rate.

Here is a rare opportunity to get Big Al genetics in conventional CSS semen! Use this semen from SOR Big Al to make export eligible embryos! In the words of Dr Aaron Cooper, PHD in Bovine Genetics and former herdsman for Heartbrand: "SOR Big Al's structural design, overall balance and disposition are impressive. He has a rare combination of smoothness and yet power at the same time. His daughters will pay huge dividends for many years to come because of his maternal value." Semen stored at Sexing Technologies where it was collected.
